HTML 5

## HEAD ELEMENTS

DOCTYPE
```
<!DOCTYPE html>
<head>
...
```

The **doctype** is not case-sensitive. It has been simplifed from the unwieldy HTML4/XHTML version to this syntax above.

HEAD AND META
```
<head>
    <meta charset="utf-8">
</head>
```

The **meta** element has been simplified. The http-equiv="Content-Type" and content="text/html" attributes can be excluded to produce this pared-down example above.

LINK
```
<link rel="stylesheet" href="css/styles.css?v=1.0">
```

Usually, **<link>** elements have included a type attribute, for instance, with a value of "text/css"; HTML5-based syntax encourages you to drop the type attribute completely.

NAV
```
<nav>
    <ul>
        <li>Home</li>
        <li>Portfolio</li>
        <li>Blog</li>
        <li>Contact</li>
        <li>Pages</li>
    </ul>
</nav>
```

HEADER
```
<header>
    <img src="logo.png" alt="The Elements" height="100" width="250">
</header>
```

TIME AND DATE
```
<time datetime="2012-06-12">Tuesday, 12 June 2012</time>
```
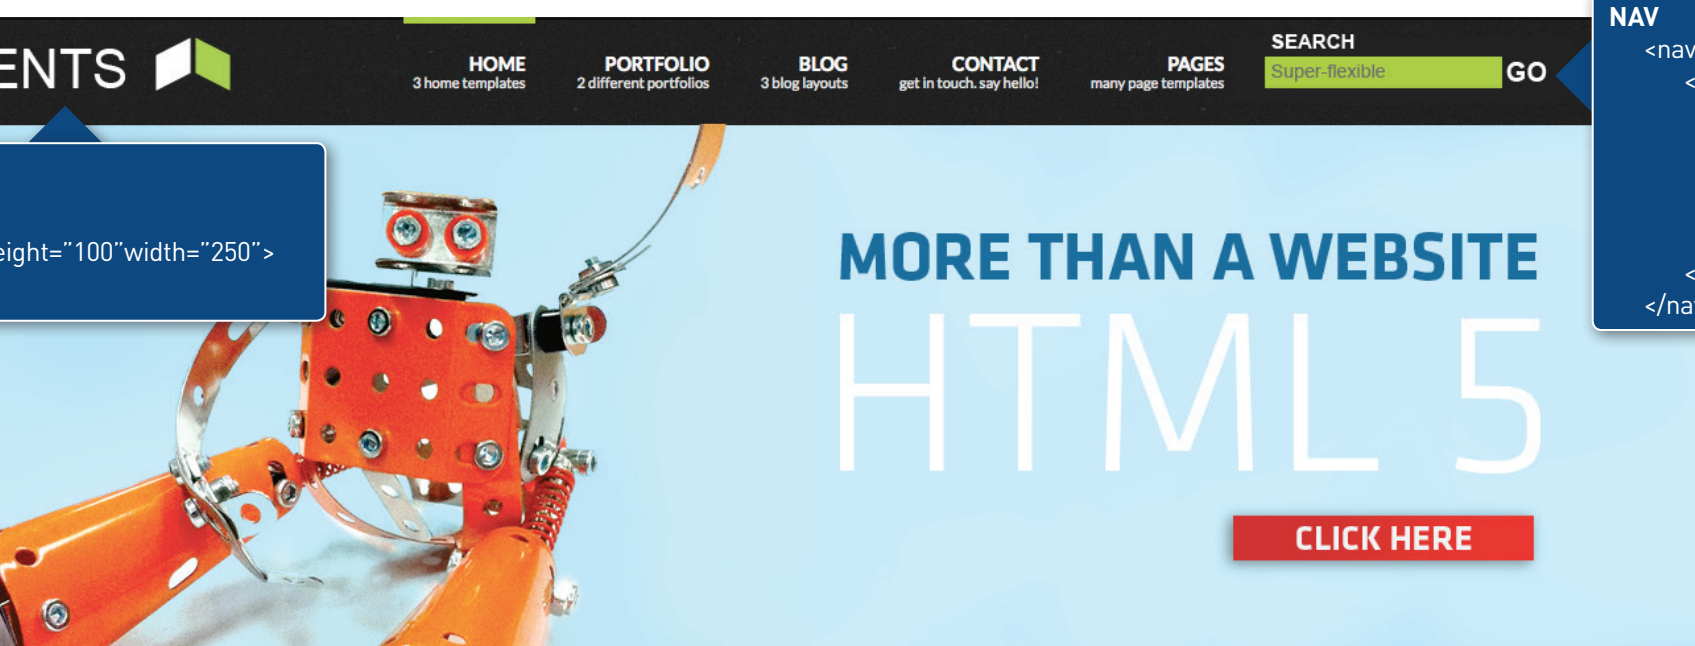

The **time** element allows you to mark up the time structure of content in a machine-readable way; for example, a user agent can add a reminder to a calendar, or a search engine can filter results based on time. This element also allows you to express dates and times in a format of your choice using the **datetime** attribute.

```

HGROUP
```
<hgroup>
    <h1>Semantic Elements <i>within</i> Content</h1>
    <h2>Form Tags and Attributes</h2>
</hgroup>
```

The **hgroup** element is used to group related, consecutive heading elements such as titles and subtitles.
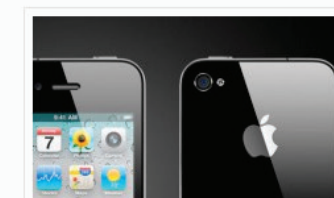

Semantic Elements *within* Content
Form Tags and Attributes
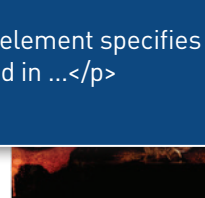

This element specifies a list of options to be displayed in or adjacent to an input field, values being populated by <option> elements. In Opera, this displays as a drop-down list of values when a user clicks on the input field.

Friendly Venus Themes

As premium themes go, Venus by Friendly Themes has it all. It's beautiful, unique, easy to use and their support is out of this world. The home page - which is entirely made from widget areas - is absolutely incredible. The portfolio is delightful and the contact form just...works! 5 stars simply doesn't do it justice.

MARK
```
<section>
    <p>A <mark>super-flexible</mark> ...</p>
</section>
```

The **mark** element is used to high-light text for reference purposes due to its relevance in another context; for example, to highlight a word a user has searched for in a search field.
